

+++++++>>

2017.02.12.1.08.PM

Continuing our efforts with Drupal, but first let's see about creating an actual document in Joomla and WordPress

Creating first account for Joomla for starters

Your site has some commonly used modules already preconfigured. These include:

- [Blog roll](#), which lets you link to other blogs. We've put in two examples, but you'll want to change them. When you are logged in, click on edit blog roll to update this.
- [Most Read Posts](#) which lists articles based on the number of times they have been read.
- [Older Articles](#) which lists out articles by month.
- [Syndicate](#) which allows your readers to read your posts in a news reader.

Each of these modules has many options which you can experiment with in the Module Manager in your site Administrator. Joomla! also includes many other modules you can incorporate in your site. As you develop your site you may want to add more module that you can find at the [Joomla Extensions Directory](#).
