

PHP and My SQL Install

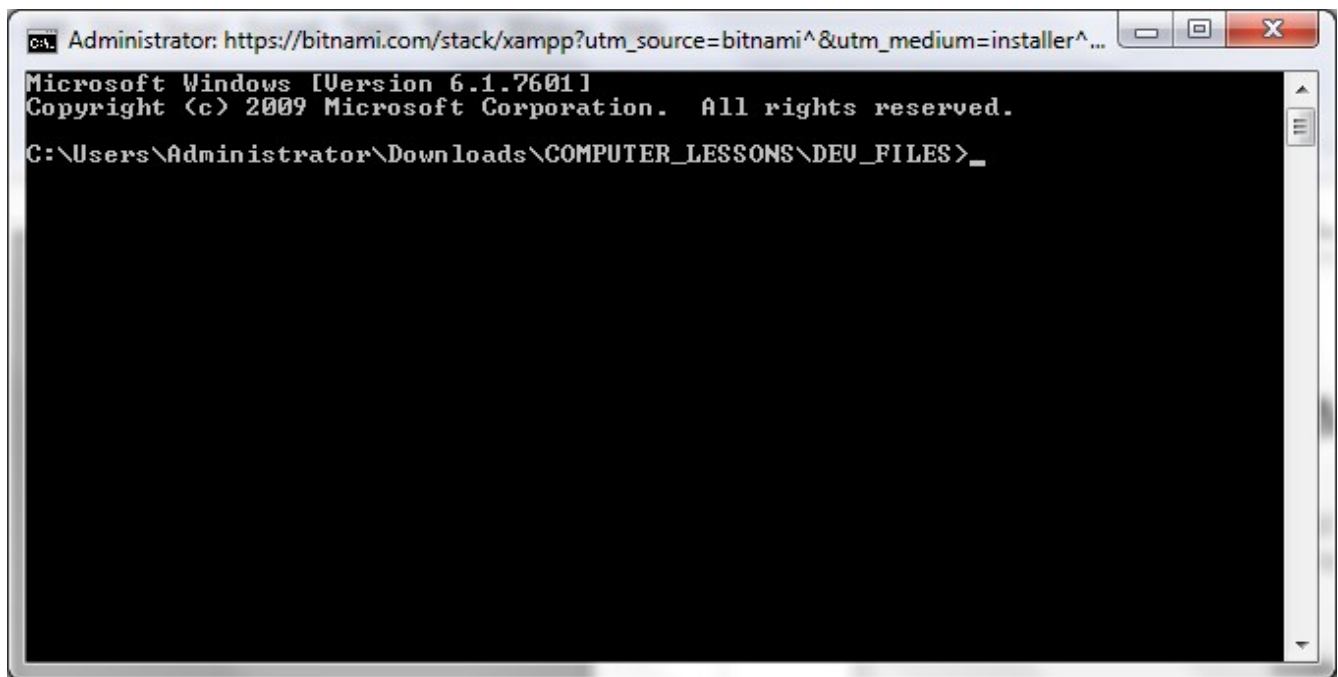

Foreword:

Perform certain housekeeping Prior to installing Xampp to your Environment. Must modify User Account Control (UAC) Settings, temporarily... To do this, go to Windows Search and Type UAC-Modify as needed based on screenshot below. Your Anti-virus Software services may need to stop as well.

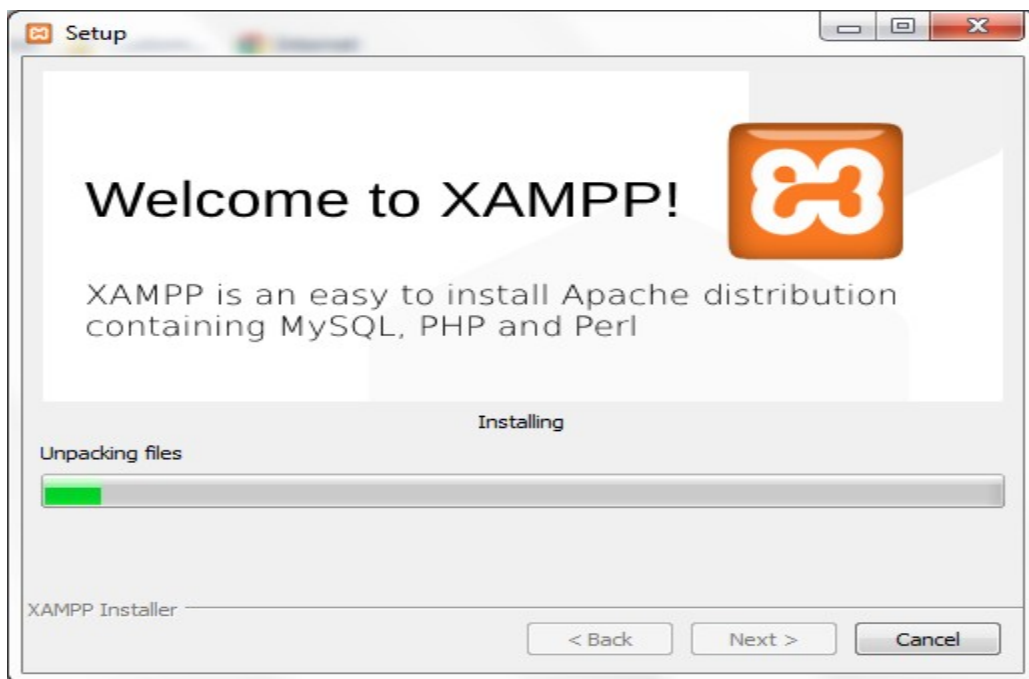

Be sure to turn on Anti-virus and modify UAC again as previously set prior to continuing your setup and configuration

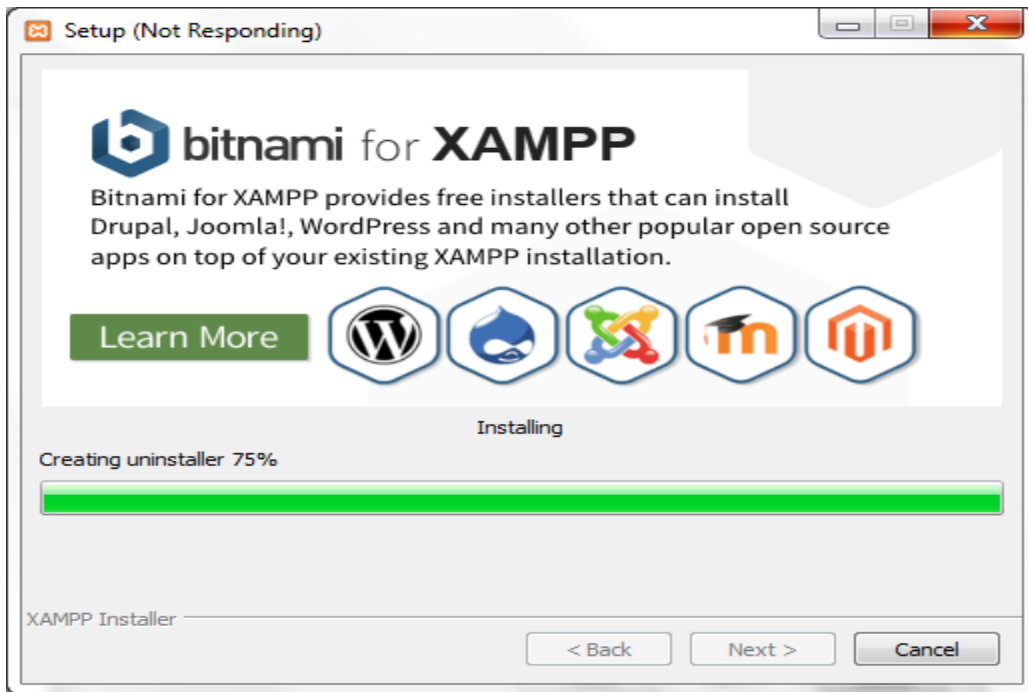

Ignore this: Nothing to see here...Minimize it though, basically grabbing installation files from Directory

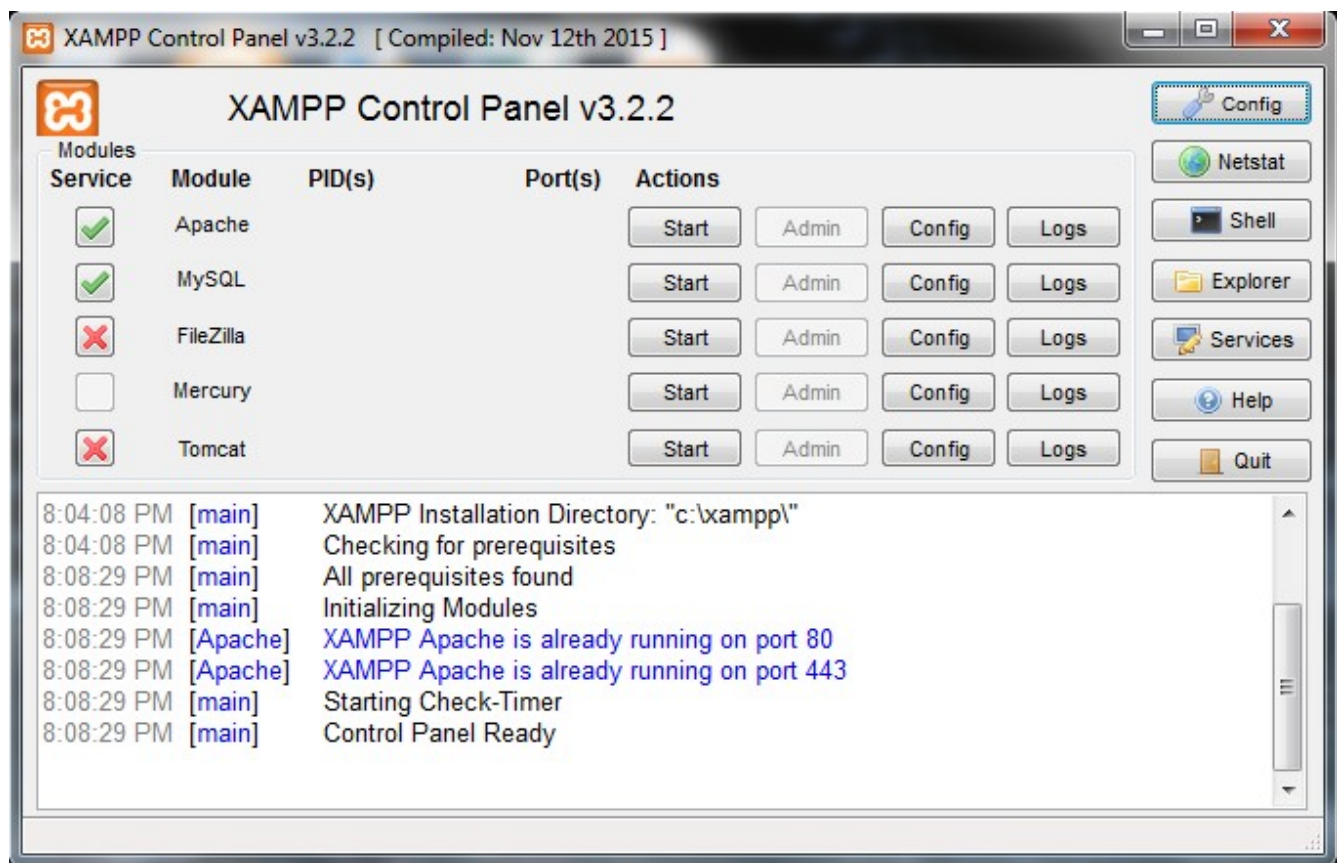

Once you hit Next, just let it do its thing for a little while, then you are going to launch the Control Panel

From here, you want to start both Apache and MySQL

You may be Prompted to change your password from the Default root user Password to anything you want; something more secure...

WARNING:

In doing the above, you will lose access to MyPHPAdmin console, you will therefore need to follow additional steps to make your environment live again-

Steps 1:

Change my.config in **C:\xampp\mysql\bin\my.config** to the same password entered through MyPHP Admin Console, when changing for Root User.

Steps 2:

Modify config.inc.php file in the following directory: **C:\xampp\phpMyAdmin\config.inc.php** to reflect, again, the same password entered in the Console

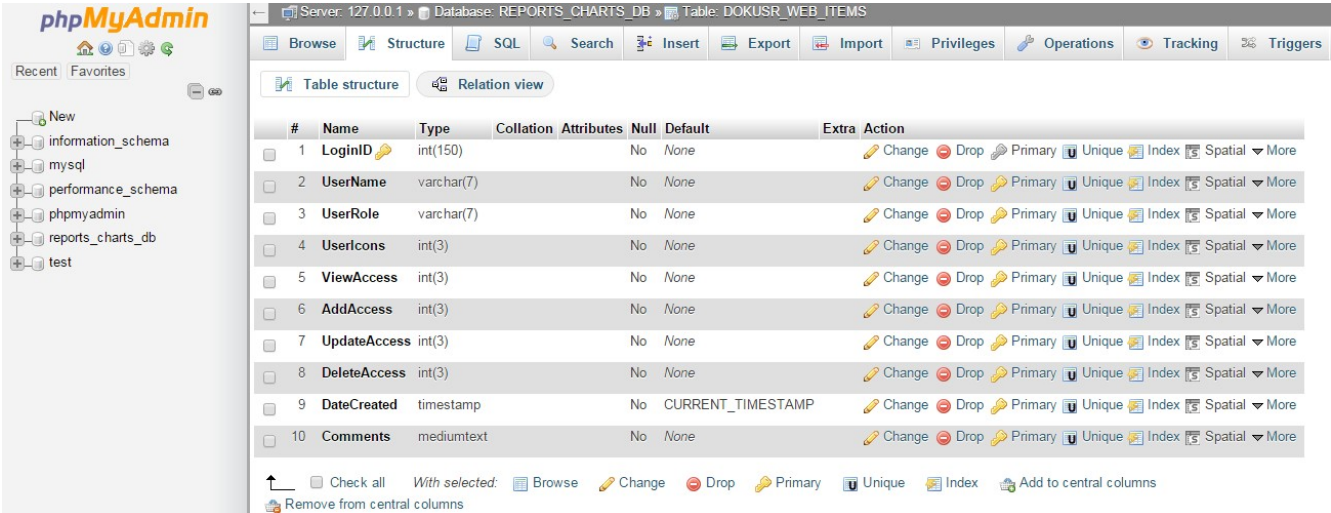

Lastly, you need to restart services for MySQL, then launch a PHP or HTML file to your browser: via localhost to test your configuration. If you are successful, you should see your page in your Browser

IMPORTANT:

You may also need to check to make sure you are connecting to the right Web Server and folder, in this case **localhost/tutorials/index.php** (C:\xampp\htdocs\tutorials)

Some users have reported defaulting to dashboard directory files, located @ **C:\xampp\htdocs\dashboard**

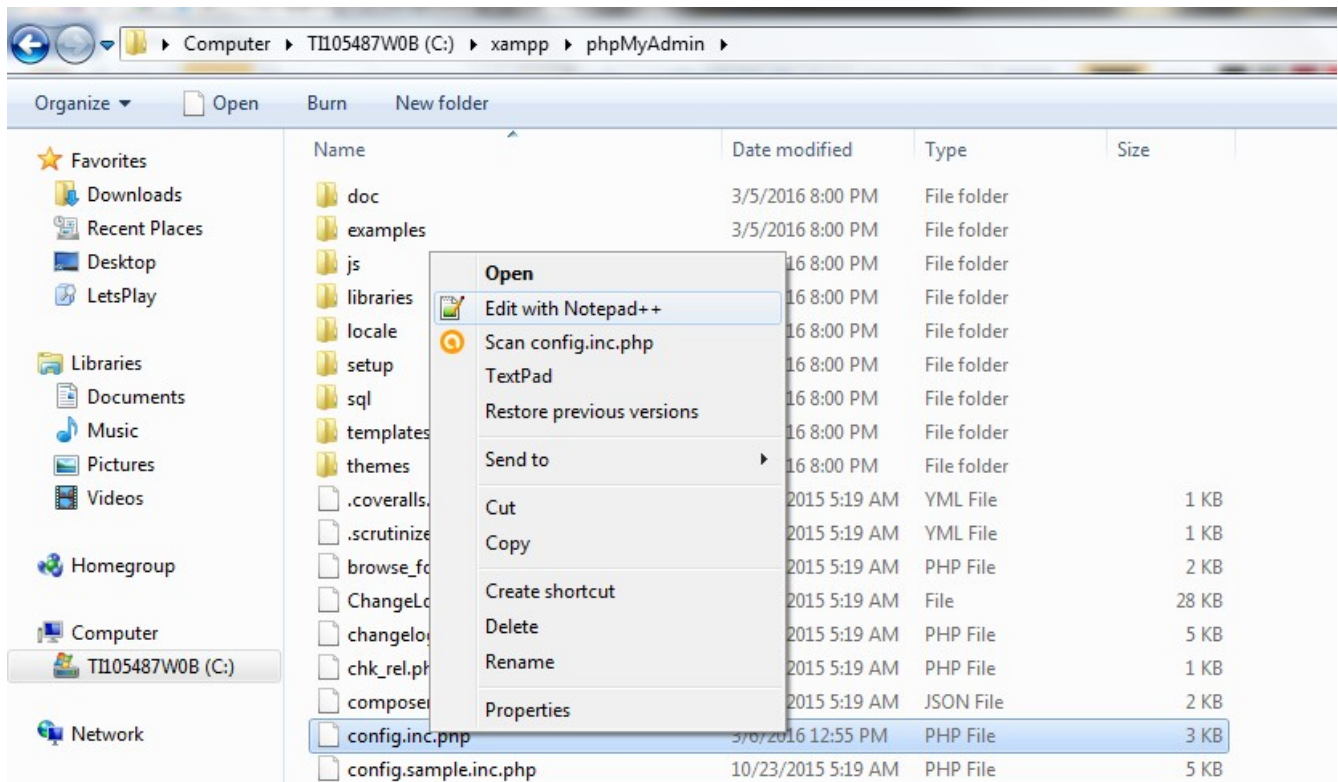

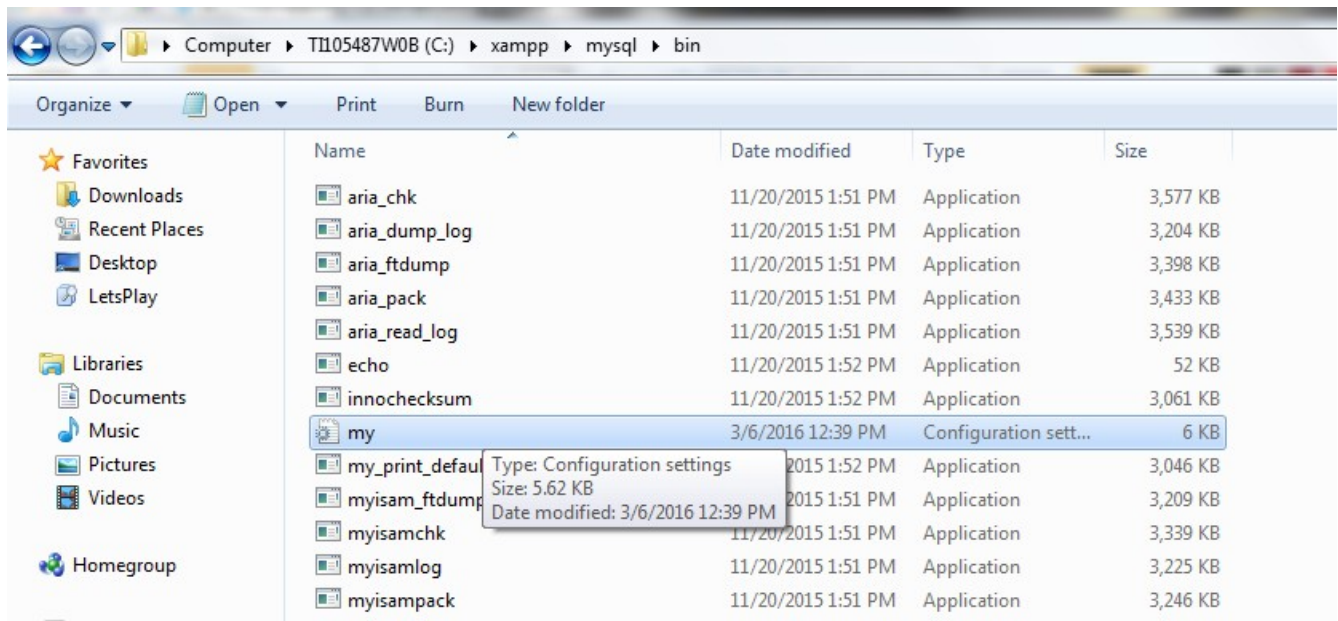

See screenshots...

The screenshot displays the phpMyAdmin interface. The top navigation bar includes options like Browse, Structure, SQL, Search, Insert, Export, Import, Privileges, Operations, Tracking, and Triggers. The main content area shows the 'Table structure' view for the table 'DOKUSR_WEB_ITEMS' in the 'REPORTS_CHARTS_DB' database. The table structure is as follows:

#	Name	Type	Collation	Attributes	Null	Default	Extra	Action
1	LoginID	int(150)			No	None	Primary Unique Index Spatial	Change Drop
2	UserName	varchar(7)			No	None	Primary Unique Index Spatial	Change Drop
3	UserRole	varchar(7)			No	None	Primary Unique Index Spatial	Change Drop
4	UserIcons	int(3)			No	None	Primary Unique Index Spatial	Change Drop
5	ViewAccess	int(3)			No	None	Primary Unique Index Spatial	Change Drop
6	AddAccess	int(3)			No	None	Primary Unique Index Spatial	Change Drop
7	UpdateAccess	int(3)			No	None	Primary Unique Index Spatial	Change Drop
8	DeleteAccess	int(3)			No	None	Primary Unique Index Spatial	Change Drop
9	DateCreated	timestamp			No	CURRENT_TIMESTAMP	Primary Unique Index Spatial	Change Drop
10	Comments	mediumtext			No	None	Primary Unique Index Spatial	Change Drop

At the bottom of the table structure view, there are controls for 'Check all', 'With selected', and 'Remove from central columns'.
