Enabling Web Services parts to allow more options for us

The screenshot shows the Drupal administration interface. At the top, there is a navigation bar with 'Back to site', 'Manage', 'Shortcuts', and 'DököllAdmin'. Below this is a secondary navigation bar with icons for 'Content', 'Structure', 'Appearance', 'Extend', 'Configuration', 'People', 'Reports', and 'Help'. The main content area is titled 'Disabled' and contains a table with the following data:

RESOURCE NAME	PATH	DESCRIPTION	OPERATIONS
Base field override	/entity/base_field_override/{base_field_override}		Enable
Block	/entity/block/{block}		Enable
Comment	/comment/{comment}		Enable
Comment type	/entity/comment_type/{comment_type}		Enable
Content type	/entity/node_type/{node_type}		Enable
Custom block	/block/{block_content}		Enable
Custom block type	/entity/block_content_type/{block_content_type}		Enable
Custom menu link	/admin/structure/menu/item/{menu_link_content}/edit		Enable

Blocks are important when embedding stuff to UI, let's grab it and see what it does for us

This screenshot is similar to the previous one, showing the 'Disabled' section of the Drupal administration interface. In this version, the 'Block' row in the table is highlighted with a blue background, and the text 'Block' in the 'RESOURCE NAME' column is also highlighted in blue. The rest of the interface, including the navigation bars and other rows in the table, remains the same.

Settings for resource *Block* ☆

Home » Administration » Configuration » Web services » Rest

Here you can restrict which HTTP methods should this resource support. And within each method, the available serialization formats and authentication providers.

GET

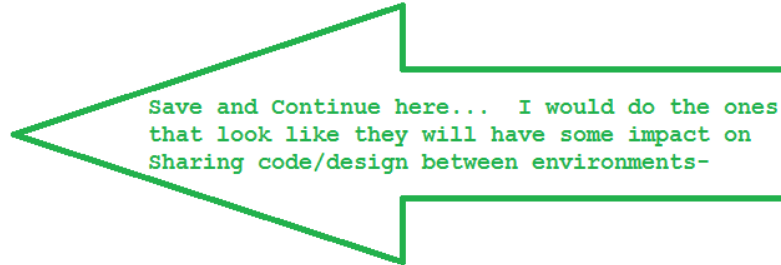

Accepted request formats

- hal_json
- json
- xml

Authentication providers

- basic_auth
- cookie

Save configuration

Okay we will leave it here for now and go from there...
