

DÖKÖLL SOLUTIONS, INC.

Software Justification

App Dev

Design/Code

Introduction:

A proposal to create a Dököll Project Dashboards Web Application to collect computer Application Development Documentation, Inventory, Reports, Charts to help Dököll Solutions, Inc. Project teams keep track of tasks in a Server database, client currently using a Spreadsheets database. The App will collect, organize, log, as well as manage users, admin code, error logs and other information as an improvement to the current Spreadsheets database... The Dököll Project Dashboards App will be comprised of Charts and Reports, accessible by searching the Web application with a keyword and clicking a button.

Benefit:

- (1) The Dököll Project Dashboards will greatly enhance productivity for Dököll Project members.
- (2) Members will be able access data from a database right away, while on the job, via webpage... removing the need to wait for permission, or getting the famous 'read only'

option to access current Spreadsheets.

- (3) The data collected in the Dököll Project Dashboards database can be updated by multiple users at the same time.

Related Information:

Please consult the Functional and Technical Specification Documentation for system requirements, software being used in creating the Dököll Project Dashboards App.
