

+++++++>>

2016.10.30.2.45.PM

We decided to push on despite the previous error, we will get back to it; in the interest of time with the project, we want to keep the process going to meet the deadline and satisfy the Project Schedule-

Copied below class from one of the Journal Entry documents and running with it..

TechNotes:

this is necessary by the way because previous file got corrupted so we are continuing with a newer file

```
public class MyWebSrsBean
{
    public MyWebSrsBean()
    {
        super();
    }
    //... //your method begins here...
    public String SubmitEntry (String inputSiteNo){
    return "Howdy, your Site No is: " + inputSiteNo;
    }
}
```

here is our current class now
